Riverside Community Garden - Annual Water Report 2026

Prepared by the garden committee for the members meeting.

Summary of the season: the garden used 182,400 litres of water between April and September, which is 14 percent less than in 2025. The new drip irrigation on beds 1 to 12 saved most of the water. Rainwater from the two collection tanks covered 38 percent of the total use.

Monthly water use (litres)

April 18,900
May 27,300
June 39,800
July 44,100
August 35,600
September 16,700

The peak in July followed eleven days without rain.

Costs and repairs

The water bill for the season was 2,310 euros. Two leaks were repaired: one at the main valve near the shed and one in the hose line to bed 7. The committee bought a third rain tank for 420 euros, to be installed before the next season.

Decisions for 2027

1. Extend drip irrigation to beds 13 to 20.
2. Install the third rain tank by March.
3. Read the water meter every two weeks.
4. Next members meeting: Friday 6 November, 18:00, in the shed.
